TMFC038 – Resource Performance Management

1. Overview

Component Name	ID	Description	ODA Function Block
Resource Performance Management	TMFC038	Resource Performance Management component monitors, analyzes, and reports on the performance of the service provider's resources.	Production

2. eTOM Processes, SID Data Entities and Functional Framework Functions

2.1. eTOM L2 - SID ABEs links

2.2. eTOM business activities

eTOM business activities this ODA Component is responsible for:

Identifier	Level	Business Activity Name	Description
1.5.4	L2	Resource Readiness and Support	Resource Readiness & Support processes are responsible for managing resource infrastructure to ensure that appropriate application, computing and network resources are available and ready to support the Fulfillment, Assurance and Billing processes in instantiating and managing resource instances, and for monitoring and reporting on the capabilities and costs of the individual FAB processes. / Responsibilities of these processes include but are not limited to: / • Supporting the operational introduction of new and/or modified resource infrastructure and conducting operations readiness testing and acceptance; • Managing planned outages; • Managing and ensuring the ongoing quality of the Resource Inventory; • Analyzing availability and performance over time on resources or groups of resources, including trend analysis and forecasting; • Demand balancing in order to maintain resource capacity and performance • Performing proactive maintenance and repair activities; • Establishing and managing the workforce to support the eTOM processes • Managing spares, repairs, warehousing, transport and distribution of resources and consumable goods. • Conducting Vulnerability Management; • Conducting Threat Assessments; • Conducting Risk Assessments; • Conducting Risk Mitigation; • Conducting Secure Configuration Activities

1.5.4.2	L3	Enable Resource Performance Management	The responsibilities of the Enable Resource Performance Management processes are twofold - support Resource Performance Management processes by proactively monitoring and assessing resource infrastructure performance, and monitoring, managing and reporting on the capability of the Resource Performance Management processes. // Proactive management is undertaken using a range of performance parameters, whether technical, time, economic or process related. // The responsibilities of the processes include, but are not limited to: // • Undertaking proactive monitoring regimes of resource infrastructure as required to ensure ongoing performance within agreed parameters over time; / • Developing and maintaining a repository of acceptable performance threshold standards for resource instances to support the Resource Performance Management processes; / • Undertaking trend analysis, and producing reports, of the performance of resource infrastructure to identify any longer term deterioration; / • Monitoring and analyzing the resource instance analyzes produced by the Resource Performance Management processes to identify problems that may be applicable to the resource infrastructure as a whole; / • Sourcing details relating to resource instance performance and analysis from the resource inventory to assist in the development of trend analyzes; / • Logging the results of the analysis into the resource inventory repository; / • Establishing and managing resource performance data collection schedules, including managing the collection of the necessary information from the Resource Data Collection & Distribution processes, to support proactive monitoring and analysis activity, and requests from Resource Performance // Management processes for additional data to support resource instance performance analysis; / • Establishing and managing facilities to support management of planned resource infrastructure and resource instance outages; / • Establishing, maintaining and managing the testing of resource performance control plans to cater for anticipated resource performance disruptions; / • Proactively triggering the instantiation of control plans to manage performance through programmed and/or foreseen potentially disruptive events, i.e. anticipated traffic loads on Xmas day, planned outages, etc.; / • Tracking and monitoring of the Resource Performance Management processes and associated costs (including where resource infrastructure is deployed and managed by third parties), and reporting on the capability of the Resource Performance Management processes; / • Establishing and managing resource performance notification facilities and lists to support the Resource Performance Management notification and reporting processes / • Supporting the Support Service Quality Management process.
---------	----	--	---

1.5.9	L2	Resource Performance Management	Resource Performance Management processes encompass managing, tracking, monitoring, analyzing, controlling and reporting on the performance of specific resources. They work with basic information received from the Resource Data Collection & Distribution processes. / / If the analysis identifies a resource performance violation or a potential service performance violation, information will be passed to Resource Trouble Management and/or Service Quality Management as appropriate. The latter processes are responsible for deciding on and carrying out the appropriate action/response. This may include requests to the Resource Performance Management processes to install controls to optimize the specific resource performance. / The Resource Performance Management processes will continue to track the resource performance problem, ensuring that resource performance is restored to a level required to support services.
-------	----	---------------------------------	---

1.5.9.1	L3	Monitor Resource Performance	The objective of the Monitor Resource Performance processes is to monitor received resource performance information and undertake first-in detection. / The responsibilities of the processes include, but are not limited to: •Undertaking the role of first in detection by monitoring the received specific resource performance data; / •Comparing the received specific resource performance data to performance standards set for each specific resource (available from the Resource Inventory); / •Assessing and recording received specific resource performance data which is within tolerance limits for performance standards, and for which continuous monitoring and measuring of specific resource performance is required; / •Recording the results of the continuous monitoring for reporting through the Report Resource Performance processes; / •Detecting performance threshold violations which represent specific resource failures due to abnormal performance; / •Passing information about resource failures due to performance threshold violations to Resource Trouble Management to manage any necessary restoration activity as determined by that process; / •Passing information about potential specific service performance degradations arising from specific resource degradations to Service Quality Management to manage any necessary restoration activity as determined by that process; / •Detecting performance degradation for specific resources which provide early warning of potential issues; / •Forwarding resource performance degradation notifications to other Resource Performance Management processes, which manage activities to restore normal specific resource performance / •Logging specific resource performance degradation and violation details within the repository in the Manage Resource Inventory processes to ensure historical records are available to support the needs of other processes.
---------	----	------------------------------	--

1.5.9.2	L3	Analyze Resource Performance	The objective of the Analyze Resource Performance processes is to analyze the information received from the Monitor Resource Performance process to evaluate the performance of a specific resource. / / The responsibilities of the processes include, but are not limited to: / •Undertaking analysis as required on specific resource performance information received from the Monitor Resource Performance processes; / •Initiating, modifying and cancelling continuous performance data collection schedules for specific resources required to analyze specific resource performance. These schedules are established through requests sent to the Enable Resource Data Collection & Distribution processes; / •Determining the root causes of specific resource performance degradations and violations; / •Recording the results of the analysis and intermediate updates in the Resource Inventory for historical analysis and for use as required by other processes / •Undertaking specific detailed analysis (if the original requested came from Service Quality Management processes) to discover the root cause of service performance degradations that may be arising due to interactions between resource instances, without any specific resource instance having an unacceptable performance in its own right.
---------	----	------------------------------	---

1.5.9.4	L3	Report Resource Performance	The objective of the Report Resource Performance processes is to monitor the status of resource performance degradation reports, provide notifications of any changes and provide management reports. / These processes are responsible for continuously monitoring the status of resource performance degradation reports and managing notifications to other processes in the Resource-Ops and other layers, and to other parties registered to receive notifications of any status changes. Notification lists are managed and maintained by the Enable Resource Performance Management processes. / These processes record, analyze and assess the resource performance degradation report status changes to provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Resource Performance Management process. These specialized summaries could be specific reports required by specific audiences.
---------	----	-----------------------------	--

1.5.9.5	L3	Create Resource Performance Degradation Report	The objective of the Create Resource Performance Degradation Report process is to create a new resource performance degradation report, modify existing resource performance degradation reports, and request cancellation of existing resource performance degradation reports. / A new resource performance degradation report may be created as a result of specific resource performance notifications undertaken by the Monitor Resource Performance processes, or at the request of analysis undertaken by other Service-Ops or Resource-Ops or party management processes which detect that some form of deterioration or failure has occurred requires an assessment of the specific resource performance. / If the resource performance degradation report is created as a result of a notification or request from processes other than Monitor Resource Performance processes, the Create Resource Performance Degradation Report processes are responsible for converting the received information into a form suitable for the Resource Performance Management processes, and for requesting additional information if required.
1.5.9.7	L3	Close Resource Performance Degradation Report	Close a resource performance degradation report when the resource performance has been resolved

2.3. SID ABEs

SID ABEs this ODA Component is responsible for:

SID ABE L1	SID ABE L1 Definition	SID ABE L2 (or set of BEs)	SID ABE L2 Definition
------------	-----------------------	----------------------------	-----------------------

Resource Performance ABE	The Resource Performance ABE collects information used to correlate, consolidate, and validate various performance statistics and other operational characteristics of Resources. Each of these entities also enables network performance assessment against planned goals, performs various aspects of trend analysis, including error rate and cause analysis and Resource degradation. Entities in this ABE also includes statistics defining Resource loading, and traffic trend analysis.		(no description available)
Performance ABE	(no description available)	MeasurementProductionJob BE	(no description available)
Performance ABE	(no description available)	AdhocCollection BE	(no description available)
Performance ABE	(no description available)	MeasurementCollectionJob BE	(no description available)
Performance ABE	The Performance ABE is a pattern that represents a measure of the manner in which a Product and/or Service and/or Resource is functioning.	Performance Threshold ABE	(no description available)

Resource Trouble ABE	The Resource Trouble ABE collects information about problems found in allocated resource instances, regardless of whether the problem is physical or logical. Entities in this ABE capture detection, root cause, and resolution of these problems and maintain a history of the activities involved in diagnosing and solving the problem. This history includes tracking, reporting, assigning people to fix the problem, testing and verification, and overall administration of repair activities.	Alarm ABE	(no description available)
----------------------	--	-----------	----------------------------

2.4. Functional Framework Functions

Function ID	Function Name	Aggregate Function L1	Aggregate Function L2	Function Description
498	Resource Performance Data Analyzing	Resource Performance Management	Resource Performance Supervision	Resource Performance Data Analyzing functions provide the necessary functionality to analyze the performance of the various service provider's resources. This includes: Analyzing performance data received from Resource Performance Monitoring and historic performance data or system environment data / • Notify operations applications for automatic or manual action in case of alarming analysis results. / • Determining the root causes of resource performance degradations

499	Resource Performance Data Aggregation and Trend Analyzing	Resource Performance Management	Resource Performance Supervision	Resource Performance Data Aggregation and Trend Analyzing provides data aggregation and trend analysis in resource performance monitoring
501	Resource Performance Event Correlation	Resource Performance Management	Resource Performance Supervision	Resource Performance Event Correlation provides performance event correlation in resource performance monitoring.
502	Resource Performance Data Accumulation	Resource Performance Management	Resource Performance Supervision	Resource Performance Data Accumulation provides performance data accumulation for resource performance monitoring, including real time monitoring data
903	Anomaly Monitoring	Resource Performance Management	Resource Performance Supervision	Anomaly Monitoring; System and network monitoring activity, determining whether it is normal or anomalous, based on rules, signatures or heuristics.

1066	Resource Performance Event Filtering	Resource Performance Management	Resource Performance Supervision	[Data-quality issue: this row's Description in the source document is a verbatim copy of function 502's description, not a description of "Resource Performance Event Filtering."] Resource Performance Data Accumulation provides performance data accumulation for resource performance monitoring, including real time monitoring data
------	--------------------------------------	---------------------------------	----------------------------------	--

3. TM Forum Open APIs & Events

The following part covers the APIs and Events; this part is split in 3: - List of Exposed APIs - This is the list of APIs available from this component. - List of Dependent APIs - In order to satisfy the provided API, the component could require the usage of this set of required APIs. - List of Events (generated & consumed) - The events which the component may generate are listed in this section along with a list of the events which it may consume. Since there is a possibility of multiple sources and receivers for each defined event.

3.1. API Context Diagram

(SVG source: [TMFC038 API Context.svg](#) — hand-drawn rather than PlantUML for this one diagram, since PlantUML's automatic layout couldn't give each API its own straight, individually-anchored connector at a chosen height. Generated by the component-specification-documentation skill's scripts/render_api_context_svg.py.)

3.2. Exposed APIs

API ID	API Name	Mandatory / Optional	API Version	Resource	Operations
TMF628	UNRESOLVED-TMF628	Mandatory	4	measurementCollectionJob	POST, GET, GET /id, PATCH /id, DELETE /id
TMF628	UNRESOLVED-TMF628	Mandatory	4	onDemandCollection*	POST, GET, GET /id, PATCH /id, DELETE /id

TMF628	UNRESOLVED-TMF628	Mandatory	4	performanceIndicatorGroupSpecification	POST, GET, GET /id, PATCH /id, DELETE /id
TMF628	UNRESOLVED-TMF628	Mandatory	4	performanceIndicatorSpecification	POST, GET, GET /id, PATCH /id, DELETE /id
TMF628	UNRESOLVED-TMF628	Mandatory	4	trackingRecord*	GET, GET /id
TMF649	UNRESOLVED-TMF649	Mandatory	4	threshold	POST, GET, GET /id, PATCH /id, DELETE /id
TMF649	UNRESOLVED-TMF649	Mandatory	4	thresholdJob	POST, GET, GET /id, PATCH /id, DELETE /id
TMF642	Alarm Management API	Optional	5	alarm	GET, GET /id, POST
TMF642	Alarm Management API	Optional	4	alarm	POST, GET, GET /id, PATCH /id, DELETE /id
TMF701	UNRESOLVED-TMF701	Optional	4	processFlow	POST, GET, GET /id, DELETE
TMF701	UNRESOLVED-TMF701	Optional	4	taskFlow	PATCH, GET, GET /id

3.3. Dependent APIs

API ID	API Name	API Version	Mandatory / Optional	Resource	Operations
TMF628	UNRESOLVED-TMF628	TMF628	Optional	measurementCollectionJob*	POST, GET, GET /id, PATCH /id, DELETE /id
TMF628	UNRESOLVED-TMF628	TMF628	Optional	onDemandCollection*	POST, GET, GET /id, PATCH /id, DELETE /id
TMF628	UNRESOLVED-TMF628	TMF628	Optional	performanceIndicatorGroupSpecification*	POST, GET, GET /id, PATCH /id, DELETE /id

TMF628	UNRESOLVED-TMF628	4	Optional	performanceIndicatorSpec	POST, GET, GET /id, PATCH /id, DELETE /id
TMF628	UNRESOLVED-TMF628	4	Optional	trackingRecord*	GET, GET /id
TMF639	Resource Inventory Management API	4	Mandatory	resource	GET, GET /id
TMF673	Geographic Address Management API	4	Optional	geographicAddress	GET, GET /id
TMF673	Geographic Address Management API	4	Optional	geographicSubAddress	GET, GET /id
TMF674	Geographic Site Management API	4	Optional	geographicSite	GET, GET /id
TMF675	UNRESOLVED-TMF675	4	Optional	geographicLocation	GET, GET /id
TMF688	UNRESOLVED-TMF688	4	Optional	event	GET, GET /id
TMF701	UNRESOLVED-TMF701	4	Optional	processFlow	POST, GET, GET /id, DELETE
TMF701	UNRESOLVED-TMF701	4	Optional	taskFlow	PATCH, GET, GET /id

3.4. Events

The diagram illustrates the Events which the component may publish and the Events that the component may subscribe to and then may receive. Both lists are derived from the APIs listed in the preceding sections.

Published Events

API ID	API Name	Event Resources
--------	----------	-----------------

TMF701	UNRESOLVED-TMF701	processFlowCreateEvent processFlowStateChangeEvent processFlowStateDeleteEvent processFlowStateAttributeValueChangeEvent taskFlowCreateEvent taskFlowStateChangeEvent taskFlowDeleteEvent taskFlowAttributeValueChangeEvent taskFlowInformationRequiredEvent
TMF642	Alarm Management API	alarmStateChange alarmCreateEvent alarmClearEvent alarmAckEvent
TMF628	UNRESOLVED-TMF628	measurementCollectionJobCreateEvent measurementCollectionJobExecutionStateChangeEvent measurementCollectionJobDeleteEvent measurementCollectionJobAttributeValueChangeEvent measurementCollectionJobFilesReadyEvent measurementCollectionJobFilesPreparationErrorEvent onDemandCollectionCreateEvent onDemandCollectionExecutionStateChangeEvent onDemandCollectionDeleteEvent onDemandCollectionAttributeValueChangeEvent onDemandCollectionFilesReadyEvent onDemandCollectionFilesPreparationErrorEvent
TMF649	UNRESOLVED-TMF649	thresholdCreateNotification thresholdChangeNotification thresholdRuleCreateNotification thresholdRuleChangeNotification thresholdJobCreateNotification thresholdJobChangedNotification thresholdJobSuspendedNotification thresholdJobResumedNotification

Subscribed Events

API ID	API Name	Event Resources
TMF634	Resource Catalog Management API	ResourceSpecificationChangeEvent
TMF639	Resource Inventory Management API	ResourceCreateEvent ResourceAttributeValueChangeEvent ResourceStateChangeEvent ResourceDeleteEvent
TMF673	Geographic Address Management API	geographicAddressValidationStateChange
TMF701	UNRESOLVED-TMF701	processFlowCreateEvent processFlowStateChangeEvent processFlowStateDeleteEvent processFlowStateAttributeValueChangeEvent taskFlowCreateEvent taskFlowStateChangeEvent taskFlowDeleteEvent taskFlowAttributeValueChangeEvent

4. Machine Readable Component Specification

Refer to the ODA Component Directory on the TM Forum website for the machine-readable component specification files for this component.

5. References

5.1. TMF Standards related versions

Standard	Version(s)
eTOM	v24.5
SID	v25.0
Functional Framework	v24.5

5.2. Jira References

No open Jira issues currently listed for this component.

5.3. Further resources

IG1228: please refer to IG1228 for defined use cases with ODA components interactions.

6. Administrative Appendix

6.1. Document History

6.1.1. Version History

Version Number	Date	Modified by	Description of changes
0.0.1	18-May-2023	Milind Bhagwat	First draft
1.0.0	13-Jun-2023	Amaia White	Final edits prior to publication
1.0.1	25-Jul-2023	Ian Turkington	No content changed, simply a layout change to match template 3. Separated the YAML files to a managed repository.
1.0.1	14-Aug-2023	Amaia White	Final edits prior to publication
1.1.0	13-Aug-2024	Milind Bhagwat	Further edits
1.1.0	06-Sep-2024	Amaia White	Final edits prior to publication
1.2.0	17-Dec-2024	Milind Bhagwat	Removed Event API from exposed and dependent API list
1.2.0	27-Dec-2024	Rosie Wilson	Final edits prior to publication

6.1.2. Release History

Release Status	Date Modified	Modified by	Description of changes
Pre-production	13-Jun-2023	Amaia White	Initial release
Pre-production	14-Aug-2023	Amaia White	New release v1.0.1
Production	06-Oct-2023	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	06-Sep-2024	Amaia White	New release 1.1.0
Production	01-Nov-2024	Adrienne Walcott	Updated to reflect TM Forum Approved status

Pre-production	18-Dec-2024	Rosie Wilson	New release 1.2.0
Production	07-Mar-2025	Adrienne Walcott	Updated to reflect TM Forum Approved status

6.2. Acknowledgements

This document was prepared by the members of the TM Forum Component and Canvas project team.
