TMFC011 – Resource Order Management

1. Overview

Component Name	ID	Description	ODA Function Block
Resource Order Management	TMFC011	The Resource Order Management Component manages the end-to-end lifecycle of a resource order request. This includes validating resource availability as well as the resource order request. Other functionality includes resource order assurance, resource order decomposition and resource order tracking, along with orchestrating activation and the test and turn-up processes.	Production

2. eTOM Processes, SID Data Entities and Functional Framework Functions

2.1. eTOM business activities

eTOM business activities this ODA Component is responsible for:

Identifier	Level	Business Activity Name	Description
1.5.5	L2	Resource Order Management	Resource Order Management business process directs and controls ordering, scheduling, and allocation of resources (such as materials, equipment, and personnel) within the business. / Resource Order Management includes managing the capture of resource orders, scheduling works to support the resource order, managing the fulfillment of resource orders, picking/packing, shipping, tracking and closing orders.

1.5.5.6	L3	Manage Resource Order Capture	Manage Resource Order Capture is responsible for directing and controlling the capture and collection of resource orders from internal and external customers. // The business activity begins with the receipt of an order for resource(s), checks orders for completeness and accuracy, and ensures missing or incorrect information is requested from the customer.
1.5.5.7	L3	Manage Resource Work Order	Manage Resource Order Work business activity directs and controls all work that are required to fulfill an approved resource order by ensuring the work related to the order is planned, executed and closed in a timely and efficient manner. / Manage Resource Order Work business activity includes activities to "Initiate Resource Work Order", "Create Resource Work Order", "Review Resource Work Order", "Plan Resource Work Order", "Close Resource Work Order", "Analyze Resource Work Order" and "Report Resource Work Order".
1.5.5.8	L3	Manage Resource Order Fulfilment	Manage Resource Order Fulfillment business activity directs and controls activities that ensure that resource orders are described, internally satisfied and delivered accordingly. // Manage Resource Order Fulfillment business activity will coordinate with various business processes, such as inventory management, purchasing and logistics to ensure that resources are readily available and can be shipped to the customer in a timely manner.

1.5.5.9	L3	Manage Resource Order Picking/Packing	Manage Resource Order Picking/Packing business activity directs and controls the preparation of resources for delivery to the customer. // Manage Resource Order Picking/Packing business activity will select the resources from inventory, package them accordingly for delivery (based on the shipment method of the resource order), applying the right mark/label/designation.
1.5.5.12	L3	Manage Resource Order Tracking	Manage Resource Order Tracking business activity directs and controls the monitoring of resource order status from the time the order is placed to the time is confirmed delivered. / Manage Resource Order Tracking business activity tracks the status of the resource order, provides updates to all related parties, and ensures that issues are escalated and managed promptly.
1.5.5.13	L3	Manage Resource Order Closure	Manage Resource Order Closure business activity directs and controls the closure of an order and finalizing all supporting business activities. // Manage Resource Order Closure business activity will support order invoicing, order payment processing, and updating the resource order status based on completion status of the order.

2.2. SID ABEs

SID ABEs this ODA Component is responsible for:

SID ABE Level 1	SID ABE Level 2 (or set of BEs)	SID ABE L1 Definition	SID ABE L2 Definition
Resource Order		The Resource Order ABE contains entities related to a request to provide / update / remove Resources.	<i>(no description available)</i>

2.3. eTOM L2 - SID ABEs links

2.4. Functional Framework Functions

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
490	Resource Order Data Collection	Resource Order Data Collection function gathers any needed resource data to aid in the verification and issuance of a complete and valid resource order.	Resource Order Management	Resource Order Completion
491	Resource Order Initiation	Resource Order Initiation function issues valid and complete resource orders, and stores the order into an appropriate data store. As part of order publication, additional data might be obtained or derived to support downstream functions that are not provided in the resource order request.	Resource Order Management	Resource Order Completion

495	Resource Order Completion	Resource Order Completion completes the resource order when all activities have been completed.	Resource Order Management	Resource Order Completion
503	Resource Order Validation	The Resource Order Validation function validates the resource order request based on contract, catalog, and provisioning rules.	Resource Order Management	Resource Order Completion
452	Resource Commissioning	Resource Commissioning supports the commissioning process of a resource and ensuring that operational status' are configured.	Resource Order Management	Resource Order Orchestration
492	Resource Order Management	This function provides workflow and orchestration capability for the Resource order fulfillment.	Resource Order Management	Resource Order Orchestration
493	Resource Order Dependency Management	Manages dependencies across resource orders by triggering and follow up as needed.	Resource Order Management	Resource Order Orchestration
494	Resource Order Jeopardy Tracking	Raises jeopardies as appropriate if specified dates and workflow milestones are not met, and escalates jeopardies to appropriate management levels.	Resource Order Management	Resource Order Orchestration

529	Tactical Resource Planning	Detailed design of resources against the existing networked resource at all technology layers, ensuring that the designed resource is actually deployed and for accurately recording the resultant inventory.	Resource Order Management	Resource Order Orchestration
958	Resource Task Decomposition	By request for an orchestration of a resource the Task Item needs to be analyzed and decomposed into the part-actions necessary to take to fulfill the requested resource orchestration. The resource task item may consist of several resource tasks and may use a number of Resources. It may also be controlled by several parameters for optional behaviors. This composition of the Resource is given by configuration data available from Catalog applications and the Resource Capability Orchestration application.	Resource Order Management	Resource Order Orchestration

961	Resource Work Item Sequence Execution	Because of the “Resource Task Item Decomposition” of an orchestration request the result may be several actions that needs to take place in a specific sequence. The “Resource Work Item Sequence Execution” function executes each individual item in sequence to fulfill, or roll back according to a pre-defined configuration, and reports the sequence carry through result.	Resource Order Management	Resource Order Orchestration
496	Resource Order Tracking	Resource Order Tracking tracks the various resource orders until completed.	Resource Order Management	Resource Order Tracking & Business Value Development
497	Resource Order Status Reporting	Resource Order Status Reporting provides status reports on the resource order.	Resource Order Management	Resource Order Tracking & Business Value Development
488	Resource Parameter Allocation	Resource Parameters Allocation allocates the right resource parameters to fulfill resource orders.	Resource Management	Resource Allocation
487	Resource Parameter Reservation	Resource Parameters Reservation reserves the right resource parameters based on resource specification and resource inventory.	Resource Management	Resource Allocation

16	Fallout Automated Correction	Fallout Automated Correction function tries to automatically fix fallouts in workflows before they go to a human for handling. This includes a Fallout Rules Engine that provides the capability to handling various errors or error types based on built rules. These rules can facilitate autocorrection, correction assistance, placement of errors in the appropriate queues for manual handling, as well as access to various systems.	Fallout Management	Fallout Correction Management
17	Fallout Correction Information Collection	Fallout Correction Information Collection collects relevant information for errors or situations that cannot be handled via Fallout Auto Correction. The intent is to reduce the time required by the technician in diagnosing and fixing the fallout.	Fallout Management	Fallout Correction Management

19	Fallout Manual Correction Queuing	Fallout Manual Correction Queuing function provides the required functionality to place error fallout into appropriate queues to be handled via various staff or workgroups assigned to handle or fix the various types of fallout that occurs during the fulfillment process. This includes the ability to create and configure queues, route errors to the appropriate queues, as well as the ability for staff to access and address the various fallout instances within the queues.	Fallout Management	Fallout Correction Management
21	Fallout Orchestration	The Fallout Orchestration function provides workflow and orchestration capability across Fallout Management.	Fallout Management	Fallout Correction Management
24	Pre-populated Fallout Information Presentation	Pre-populated Fallout Information Presentation automatically position the analyzer on appropriate screens pre-populated with information about the order(s) that's subject for fallout handling.	Fallout Management	Fallout Correction Management

756	Fallout Rule Based Error Correction	Fallout Rule Based Error Correction function provides the capability to handle various errors or error types based on pre-defined rules. These rules can facilitate autocorrection.	Fallout Management	Fallout Correction Management
18	Fallout Management to Fulfillment Application Accessing	Fallout Management to Fulfillment Application Accessing function provides a variety of tools to facilitate Fallout Management access to other applications and repositories to facilitate proper Fallout Management. This can include various general access techniques such as messaging, publish and subscribe, etc. as well as specific APIs and contracts to perform specific queries or updates to various applications or repositories within the fulfillment domain.	Fallout Management	Fallout Repository Management
20	Fallout Notification	Fallout Notification function provides the means to alert people or workgroups of some fallout situation. This can be done via a number of means, including email, paging, (Fallout management interface bus) etc. This function is done via business rules.	Fallout Management	Fallout Repository Management

22	Fallout Reporting	Fallout Reporting provides various reports regarding Fallout Management, including statistics on fallout per various times periods (per hour, week, month, etc) as well as information about specific fallout.	Fallout Management	Fallout Repository Management
23	Fallout Dashboard System Log-in Accessing	Fallout Dashboard System Log-in Accessing provides auto logon capability into various applications needed to analyze and fix fallout.	Fallout Management	Fallout Repository Management

3. TM Forum Open APIs & Events

The following part covers the APIs and Events; this part is split in 3: - List of Exposed APIs - This is the list of APIs available from this component. - List of Dependent APIs - In order to satisfy the provided API, the component could require the usage of this set of required APIs. - List of Events (generated & consumed) - The events which the component may generate are listed in this section along with a list of the events which it may consume. Since there is a possibility of multiple sources and receivers for each defined event.

3.1. API Context Diagram

(SVG source: [TMFC011_API_Context.svg](#) — hand-drawn rather than PlantUML for this one diagram, since PlantUML's automatic layout couldn't give each API its own straight, individually-anchored connector at a chosen height. Generated by the component-specification-documentation skill's `scripts/render_api_context_svg.py`.)

3.2. Exposed APIs

API ID	API Name	Mandatory / Optional	API Version	Resource	Operations
TMF652	Resource Order Management API	Mandatory	4	resourceOrder cancelResourceOrder	GET GET /id POST PATCH DELETE
TMF701	Process Flow Management API	Optional	4	processFlow taskFlow	POST GET GET /id DELETE PATCH

3.3. Dependent APIs

API ID	API Name	API Version	Mandatory / Optional	Resource	Operations
TMF702	Resource Activation Management API	4	Optional	resource monitor	GET GET /id POST PATCH DELETE
TMF685	Resource Pool Management API	5	Optional	resourcePool availabilityCheck	GET GET /id POST PATCH DELETE
TMF634	Resource Catalog Management API	5	Mandatory	resourceSpecification	GET GET /id POST PATCH DELETE
TMF634	Resource Catalog Management API	4	Mandatory	resourceSpecification	GET GET /id POST PATCH DELETE
TMF639	Resource Inventory Management API	4	Mandatory	resource	GET GET /id POST PATCH DELETE

TMF664	Resource Function Activation Management API	4	Optional	resourceFunction	GET GET /id POST PATCH DELETE
TMF632	Party Management API	5	Optional	individual organization	GET GET /id
TMF632	Party Management API	4	Optional	individual organization	GET GET /id
TMF646	Appointment Management API	4	Optional	workOrder	GET GET /id
TMF673	Geographic Address Management API	4	Optional	geographicAddress	GET GET /id
TMF674	Geographic Site Management API	4	Optional	geographicSite	GET GET /id
TMF675	Geographic Location Management API	4	Optional	geographicLocation	GET GET /id

3.4. Events

The diagram illustrates the Events which the component may publish and the Events that the component may subscribe to and then may receive. Both lists are derived from the APIs listed in the preceding sections.

Published Events

API ID	API Name	Event Resources
--------	----------	-----------------

TMF652	Resource Order Management API	CancelResourceOrderInformationRequiredEvent CancelResourceOrderInformationRequiredEventPayload CancelResourceOrderStateChangeEvent CancelResourceOrderStateChangeEventPayload ResourceOrderAttributeValueChangeEvent ResourceOrderAttributeValueChangeEventPayload ResourceOrderCreateEvent ResourceOrderCreateEventPayload ResourceOrderDeleteEvent ResourceOrderDeleteEventPayload ResourceOrderInformationRequiredEvent ResourceOrderInformationRequiredEventPayload ResourceOrderStateChangeEvent ResourceOrderStateChangeEventPayload
TMF701	Process Flow Management API	processFlowCreateEvent processFlowStateChangeEvent processFlowStateDeleteEvent processFlowStateAttributeValueChangeEvent taskFlowCreateEvent taskFlowStateChangeEvent taskFlowDeleteEvent taskFlowAttributeValueChangeEvent taskFlowInformationRequiredEvent

Subscribed Events

API ID	API Name	Event Resources
--------	----------	-----------------

TMF664	Resource Function Activation Management API	resourceFunctionCreateEvent resourceFunctionChangeEvent monitorStatechangeEvent healStatechangeEvent scaleStatechangeEvent migrateStatechangeEvent
TMF702	Resource Activation Management API	resourceChangeEvent monitorCreateEvent monitorStatechangeEvent

4. Machine Readable Component Specification

Refer to the ODA Component Directory on the TM Forum website for the machine-readable component specification files for this component.

5. References

5.1. TMF Standards related versions

Standard	Version(s)

6. Administrative Appendix

6.1. Document History

6.1.1. Version History

Version Number	Date	Modified by	Description of changes
1.0.0	01-Mar-2024	Amaia White	Final edits prior to publication
1.1.0	27-Aug-2024	Gaetano Biancardi	Component update: applied new ODA Component template; exposed API removed TMF688 Event Management API; dependent API removed TMF688 Event Management API
1.1.0	06-Sep-2024	Amaia White	Final edits prior to publication
1.1.1	18-Nov-2024	Gaetano Biancardi	API version, only major version to be specified
1.1.1	24-Dec-2024	Rosie Wilson	Final edits prior to publication
1.1.2	10-Jul-2025	Rosie Wilson	Updates to description per agreed YAML updated on 03-Jun-2025; updated TMF697 in Overview Diagram from TMF679 as requested by Sylvie
1.1.2	15-Jul-2025	Rosie Wilson	Final edits prior to publication

1.2.0	13-Oct-2025	Gaetano Biancardi	Overview diagram: corrected TMF Open API typo for Work Order Mgt API Id in the overview picture (replaced TMF679 with TMF697); team agreed the following updates during the call on 07-Jan-2025 (Hugo Vaughan and Gaetano Biancardi to update in the next revision of the functional specification and YAML file): TMF702 - Resource Activation Management API - Optional; TMF634 - Resource Catalog Management API - Mandatory; TMF664 - Resource Function Activation Management API - Optional; TMF639 - Resource Inventory Management API - Mandatory
1.2.0	19-Nov-2025	Rosie Wilson	Final edits prior to publication
1.3.0	29-Jan-2026	Julien Rouland	Component update: added TMF685 ResourcePool to the dependent API; removed from functional framework 448, 568 and 569 as more related to qualification activity than a resource order
1.3.0	05-Jun-2026	Hugo Vaughan	Gen 5 API updates
1.3.0	25-Jun-2026	Sannah Sibaya	Final edits prior to publication

6.1.2. Release History

Release Status	Date Modified	Modified by	Description of changes
Pre-production	01-Mar-2024	Amaia White	Release of version 1.0.0
Production	26-Apr-2024	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	06-Sep-2024	Amaia White	Release of version 1.1.0
Production	01-Nov-2024	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	24-Dec-2024	Rosie Wilson	Release of version 1.1.1
Production	07-Mar-2025	Adrienne Walcott	Updated to reflect TM Forum Approved status

Pre-production	15-Jul-2025	Rosie Wilson	Release of version 1.1.2
Production	05-Sep-2025	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	19-Nov-2025	Rosie Wilson	Release of version 1.2.0
Production	16-Jan-2026	Adrienne Walcott	Updated to reflect TM Forum Approved status
Pre-production	25-Jun-2026	Sannah Sibaya	Release of version 1.3.0

6.2. Acknowledgements

This document was prepared by the members of the TM Forum Component and Canvas project team.
