TMFC003 – Product Order Delivery Orchestration And Management

1. Overview

Component Name	ID	Description	ODA Function Block
Product Order Delivery Orchestration And Management	TMFC003	This component manages, orchestrates, and delivers Product Orders.	CoreCommerce

2. eTOM Processes, SID Data Entities and Functional Framework Functions

2.1. eTOM business activities

eTOM business activities this ODA Component is responsible for:

Identifier	Level	Business Activity Name	Description
1.3.3	L2	Customer Order Processing Management	Customer Order Processing Management business process directs and controls all activities that operationally realize orders for customer. / Customer Order Processing Management assures the capture, processing, fulfillment, "shipping", delivery and reporting of customer orders from feasibility assessment, purchasing, payment, fulfillment and follow up with the customer for closure.
1.2.27	L2	Product Order Management	Product Order Management business direct and control processes that capture, track, fulfil, deliver and close product order requests.

1.4.5	L2	Service Activation Management	Allocation, implementation, configuration, activation and testing of specific services to meet customer requirements.
1.4.5.6	L3	Issue Service Order	Issue correct and complete service orders.
1.6.8	L2	Business Partner Order Management	Track, monitor and report on an order to another Business Partner to ensure that the interactions are in accordance with the agreed commercial agreements with the other Business Partner.

2.2. SID ABEs

SID ABEs this ODA Component is responsible for:

SID ABE Level 1	SID ABE Level 2	Description
Product Order		The Product Order ABE contains all entities required to specify a communication used to procure or update one or many Products and ProductOfferingInstances in the context of ProductSpecifications and ProductOfferingSpecifications. This pattern is used to define: CustomerProductOrder corresponding to ProductOfferingInstances ordered by a Customer from the Service Provider and BusinessPartnerProductOrder corresponding to ProductOfferingInstances ordered by the Service Provider from a Business Partner Note: Some but not all enterprises consider an Order to be a type of an Agreement. From a SID model perspective, an Order can be formalized by an Agreement and the Agreements relationship between the Agreement and the ProductOrder. This philosophy has the advantage of clearly separating two different concepts: the order from the legal formalisms associated with the order. For example, several orders may refer to the same Agreement.

Business Partner Product Order		The Business Partner Product Order ABE contains all entities required to specify a communication used to procure, update or remove one or many ProductOfferingInstances in the context of a ProductOfferingSpecification for the Service Provider. A Business Partner Product Order is also known as a Purchase Order. Note: Some but not all enterprises consider an Order to be a type of an Agreement. From a SID model perspective, an Order can be formalized by an Agreement and the Agreements relationship between the Agreement and the ProductOrder. This philosophy has the advantage of clearly separating two different concepts: the order from the legal formalisms associated with the order. For example, several orders may refer to the same Agreement.
Customer Product Order	CustomerProductOfferingOrderItem	A CustomerProductOfferingOrderItem is a specializaiton of ProductOfferingOrderItem. Each CustomerProductOfferingOrderItem requires an action (AllowedProductAction) on a ProductOffering.

Customer Product Order	CustomerProductOrder	A Customer might place orders with the Service Provider. This is represented by the CustomerProductOrder. CustomerProductOrder / CustomerProductOfferingOrderItem / CustomerProductOrderItem are sub-classes from ProductOrder / ProductOfferingOrderItem / ProductOrderItem. For further details about PartyOrder / PartyOfferingOrderItem / PartyOrderItem refer to the Business Partner guide book. A CustomerProductOrder represents a communication used to procure or update one or many ProductOfferingInstances in the context of a ProductOfferingSpecification through all its CustomerProductOfferingOrderItems. The particularity of the CustomerProductOrder is to procure or update ProductOfferingInstances for Customer even if the CustomerProductOrder might be placed by the Service Provider when applying precautionary measures in case of bad debt.
Customer Product Order	CustomerProductOrderItem	Each CustomerProductOrderItem requires an action (AllowedProductAction) on a ProductSpecification.
Customer Product Order		Handles single customer orders and the various types thereof, such as regulated and non-regulated orders. / Orders ProductOfferings and concerns Products

2.3. eTOM L2 - SID ABEs links

TMFC003 eTOM L2 - SID ABEs links

(SVG source: [TMFC003_eTOM_SID.svg](#) — hand-drawn rather than PlantUML since this component's eTOM+SID element count ($4 + 3 = 7$) is over the 6-element threshold. Link data from [TMFC003_eTOM_SID_Links.md](#).)

2.4. Functional Framework Functions

Function ID	Function Name	Function Description	Aggregate Function Level 1	Aggregate Function Level 2
16	Fallout Automated Correction	Fallout Automated Correction function tries to automatically fix fallouts in workflows before they go to a human for handling. / This includes a Fallout Rules Engine that provides the capability to handling various errors or error types based on built rules. These rules can facilitate autocorrection, correction assistance, placement of errors in the appropriate queues for manual handling, as well as access to various systems.	Fallout Management	Fallout Correction Management

17	Fallout Correction Information Collection	Fallout Correction Information Collection collects relevant information for errors or situations that cannot be handled via Fallout Auto Correction. The intent is to reduce the time required by the technician in diagnosing and fixing the fallout.	Fallout Management	Fallout Correction Management
18	Fallout Management to Fulfillment Application Accessing	Fallout Management to Fulfillment Application Accessing function provides a variety of tools to facilitate Fallout Management access to other applications and repositories to facilitate proper Fallout Management. This can include various general access techniques such as messaging, publish and subscribe, etc. as well as specific APIs and contracts to perform specific queries or updates to various applications or repositories within the fulfillment domain.	Fallout Management	Fallout Repository Management

19	Fallout Manual Correction Queuing	Fallout Manual Correction Queuing function provides the required functionality to place error fallout into appropriate queues to be handled via various staff or workgroups assigned to handle or fix the various types of fallout that occurs during the fulfillment process. This includes the ability to create and configure queues, route errors to the appropriate queues, as well as the ability for staff to access and address the various fallout instances within the queues.	Fallout Management	Fallout Correction Management
20	Fallout Notification	Fallout Notification function provides the means to alert people or workgroups of some fallout situation. This can be done via a number of means, including email, paging, (Fallout management interface bus) etc. This function is done via business rules.	Fallout Management	Fallout Repository Management
21	Fallout Orchestration	The Fallout Orchestration function provides workflow and orchestration capability across Fallout Management.	Fallout Management	Fallout Correction Management

22	Fallout Reporting	Fallout Reporting provides various reports regarding Fallout Management, including statistics on fallout per various times periods (per hour, week, month, etc) as well as information about specific fallout.	Fallout Management	Fallout Repository Management
23	Fallout Dashboard System Log-in Accessing	Fallout Dashboard System Log-in Accessing provides auto logon capability into various applications needed to analyze and fix fallout	Fallout Management	Fallout Repository Management
24	Pre-populated Fallout Information Presentation	Pre-populated Fallout Information Presentation automatically position the analyzer on appropriate screens pre-populated with information about the order(s) that's subject for fallout handling.	Fallout Management	Fallout Correction Management

120	Customer Order Capturing	Customer Order Capturing provides access to order capture and negotiation capabilities. Takes care of persistence using Customer Order Repository Management. Including support of contract printing, integration with a locally installed cash management/cash register and a retail inventory system for order completion and ordered product versioning.	Product Configuration & Activation	Offer and Product Configuration
172	Customer Order Reporting	Customer Order Reporting function provides front end support for Business, Financial and Operational reporting and analyzing of the ordering activities.	Customer Order Management	Customer Order Repository Management
174	Ordering Customer Order Error Resolution	Customer Order Error Resolution Support provides to view pool of orders resulted in error or stuck orders and enable the Customer Support to act accordingly (e.g., resend the request, notify the user with recommended action)	Customer Order Management	Customer Order Repository Management

175	Customer Support Jeopardy Notification	Customer Support Jeopardy Notification provide to view jeopardy notifications queue and enable the Customer Support to act accordingly (e.g., notify customer on due date delay)	Customer Order Management	Customer Order Repository Management
177	Customer Order Take-over Management	Customer Order Take-over Management provides an ability to take over governance of orders handled by other channels (e.g. self service) amend and relinquish, while preserving all the captured data.	Customer Order Management	Customer Order Completion
178	Customer Order Administration	Customer Order Administration provide to view all outstanding orders, progress and history displays	Customer Order Management	Customer Order Repository Management
181	Product Order Data Collection	Product Order Data Collection provides an aid in verification and issuance of a complete and valid customer order. This function checks delivery address, link with a payment, a billing account, a certified holder, etc.	Customer Order Management	Customer Order Completion

204	Customer Order Entry Finalization	The Customer Order Entry Finalization function enables finalization the Customer Order with collection of Customer Data or installed base data according to the Catalog. It allows to complete the configuration element not necessary for the quotation. The complements could also concern links with actors, dates, address, billing account.	Customer Order Management	Customer Order Completion
205	Customer Order Eligibility Validation	Customer Order Eligibility Validation function validates that the Offer & products specified on the Customer Order, are eligible from a commercial and functional point of view. It includes: - Commercial Eligibility with commercial compatibility with the already customer installed Products (corresponding to ProductOffering) - Functional Eligibility with the customer's already installed Products (corresponding to ProductSpecification).	Customer Order Management	Customer Order Commercial Eligibility

208	Customer Order Change Management	Customer Order Change Management amend pending order resulted from customer change requests or provisioning system limitation and revalidate the order.	Customer Order Management	Customer Order Change Management
209	Customer Order Cancellation	Customer Order Cancellation can optionally support Cancel for order completed by Service Order Management (this capability is dependent on the Service Order Management system's ability to roll back service provisioning). This function assesses the feasibility of order cancellation and the potential charge to the customer. If the cancellation is confirmed, it proceeds with the cancellation.	Customer Order Management	Customer Order Validation
211	Customer Order Activity Supervision	Customer Order Activity Supervision governs the control of the order amongst the ordering channels. This allows keeping the order data consistency, sharing the order data among order application channels, and alternating the control between them.	Customer Order Management	Customer Order Repository Management

212	Customer Order Versioning	Customer Order Versioning maintains order versioning including Tracking & Logging of the changes made to a purchased product.	Customer Order Management	Customer Order Repository Management
213	Pending Customer Order Maintenance	Pending Customer Orders Maintenance saves the order/quote for future processing (in case the customer is not sure if they want to go through with the order at this point)	Customer Order Management	Customer Order Repository Management

214	Customer Order Orchestration	The Customer Order Orchestration function provides workflow and orchestration capabilities at the Product Order Item level for a dedicated Customer Order. / Customer Order Orchestration function identifies Service Order Items (CFS level) according to Order Items of the Customer Order, sequences Service Order Items and distributes the Service Order requests to appropriate systems. For example : Service Order Management (SOM), potential 3rd parties, ... / This identification of Service Order Items relies on : / - the articulation between ProductSpecifications and CFSSpec described in the Catalogue Repository / - the articulation between Product Operations and CFS Operations described in the Catalogue Repository / - existing installed CFS / - the potential rules of choice if several CFS can fit in with the product. / Orchestration can take into account : / - constraints between Customer Product Order Items inside the Customer Product Order, or successive Customer Orders including modification or cancellation (in-flight changes) / - any type of business rules based on information even external to the Customer Product Order. For example : high level of priority for VIP customers / - Triggering of exception process or delivery planning update, depending on Customer Product Order or Service Order events.	Customer Order Management	Customer Order Orchestration
-----	------------------------------	---	---------------------------	------------------------------

215	Retro-active order orchestration	Retro-active Order Orchestration provides submission of a retroactive order with a past effective date (e.g., retroactive price plan change) and the handling of manual intervention requests (for order fallouts).	Customer Order Management	Customer Order Orchestration
217	Customer Order Establishment Tracking	Customer Order Establishment Tracking provides the functionality necessary to track and manage the distributed requests decomposed by Customer Order Orchestration.	Customer Order Management	Customer Order Repository Management
366	Customer Order Management	Customer Order Management provides an online access function to specific orders, to be used for management, monitoring and tracking for customer support and external agents for Upgrade of customer's products/services.	Customer Order Management	Customer Order Repository Management
647	Partner Order Management	Partner Order Management tracks, monitors and reports on a service provider initiated order to ensure that the interactions are in accordance with the agreed commercial arrangements between the service provider and another party.	Business Partner Order Management	Business Partner Order Validation

716	Order-Data Enrichment	Order Data Enrichment function acquire missing order data from surrounding systems (often values taken from catalogs and inventories, billing, fraud, etc.) or from external 3rd party systems (like country's common address or credit check system).	Customer Order Management	Customer Order Completion
717	Calculated Order Data Enrichment	Calculated Order Data Enrichment calculates missing order data values on-the-fly from existing data and ordering rules. E.g., Contract end dates, Discounted period, etc.	Customer Order Management	Customer Order Completion
718	Customer Order Validation	Customer Order Validation Function ensures that the qualified order is valid in any moment of order lifecycle, usually as data become available. Validation ensures early fallout which is less costly than encountering errors in later stages of order handling.	Customer Order Management	Customer Order Validation
719	Customer Order Storage	The Customer Order Storage function stores the valid and complete customer orders into an appropriate data storage.	Customer Order Management	Customer Order Repository Management
720	Customer Order Searching	Customer Order Searching function makes the customer orders available to other applications.		

756	Fallout Rule Based Error Correction	Fallout Rule Based Error Correction function provides the capability to handle various errors or error types based on pre-defined rules. These rules can facilitate autocorrection	Fallout Management	Fallout Correction Management
1070	Orchestration Customer Order Error Resolution	Orchestration Customer Order Error Resolution provides to view pool of orders resulted in error or stuck orders during orchestration and enable the Customer Support to act accordingly. / For example, a delay change because of resource unavailability or appointment not respected may trigger the resend of the request or notify the user with recommended action.	Customer Order Management	Customer Order Orchestration

1123	Customer Order Initialization	The Customer Order Initialization Function creates a Customer Order (either unpopulated and ready for entry of order items, or initialized with the products and identified features of a selected offer). The Customer Order thus created can be added to, deleted from, or further specified up until the Customer Order has been completed and confirmed. This Process was renamed in 24.5 old name was Product Order Initialization	Product Configuration & Activation	Offer and Product Configuration
1172	Business Partner Order Storage Management	Business Partner Order Storage Management Function is in charge of tracking Business Partner Orders for each version.	Business Partner Order Management	Business Partner Order Repository Management
1173	Business Partner Order Lifecycle Management	Business Partner Order Lifecycle Management collects Business Partner Order events and manages Business Partner Orders lifecycle.	Business Partner Order Management	Business Partner Order Repository Management

1202	Delivery Items Identification	The Delivery Items Identification function allows in the context of a customer order to consult catalogs and installed bases to identify what needs to be delivered: Service Specification (CFS Spec) and its configuration, Stock Item, Supplier Product, Work Spec, related to the ordered product.	Customer Order Management	Customer Order Delivery Preparation
1203	Order Preparation	The Order Preparation Function allows in the context of a customer order to prepare a Service Order, Supplier Order, Stock Item Order or Work Order with the necessary information. / In the case of a Product associated with an Internal Service (Know-How), this function also allows to: / • check if a corresponding Installed CFS is operational in the Service Installed Base, and so determine the operation at CFS level (creation or modification) / • possibly group in the same Service Order several ordered product, based on the same CFS specification, and/or identified to be delivered at the same time by the Customer Order Delivery Orchestration.	Customer Order Management	Customer Order Delivery Preparation

1325	Customer Order Distribution	Customer Order Distribution function enables distributing finalized customer orders to any parties and systems that need the order information and/or the notification that the order has been finalized.	Customer Order Management	Customer Order Completion
------	-----------------------------	---	---------------------------	---------------------------

3. TM Forum Open APIs & Events

The following part covers the APIs and Events; this part is split in 3: - List of Exposed APIs - This is the list of APIs available from this component. - List of Dependent APIs - In order to satisfy the provided API, the component could require the usage of this set of required APIs. - List of Events (generated & consumed) - The events which the component may generate are listed in this section along with a list of the events which it may consume. Since there is a possibility of multiple sources and receivers for each defined event.

3.1. API Context Diagram

(SVG source: [TMFC003 API Context.svg](#) — hand-drawn rather than PlantUML for this one diagram, since PlantUML's automatic layout couldn't give each API its own straight, individually-anchored connector at a chosen height. Generated by the `component-specification-documentation skill's scripts/render_api_context_svg.py`.)

3.2. Exposed APIs

API ID	API Name	Mandatory / Optional	API Version	Resource	Operations
TMF622	Product Ordering Management API	Mandatory	5	productOrder	GET GET /id POST PATCH DELETE
TMF622	Product Ordering Management API	Mandatory	5	cancelProductOrder	GET GET /id POST
TMF622	Product Ordering Management API	Mandatory	4	productOrder	POST GET GET /id PATCH DELETE
TMF622	Product Ordering Management API	Mandatory	4	cancelProductOrder	GET GET /id POST
TMF701	Process Management API	Optional	4	processFlow	POST GET GET /id DELETE
TMF701	Process Management API	Optional	4	taskFlow	POST PATCH GET GET /id
TMF701	Process Management API	Optional	5	process	POST GET GET /id PATCH
TMF701	Process Management API	Optional	5	task	POST GET GET /id PATCH
TMF701	Process Management API	Optional	5	processSpecification	POST GET GET /id PATCH

TMF701	Process Management API	Optional	5	taskSpecification	POST GET GET /id PATCH
--------	------------------------	----------	---	-------------------	---------------------------------

3.3. Dependent APIs

API ID	API Name	API Version	Mandatory / Optional	Resource	Operations
TMF620	Product Catalog Management API	5	Mandatory	productSpecification	GET GET /id
TMF620	Product Catalog Management API	5	Mandatory	productOffering	GET GET /id

TMF620	Product Catalog Management API	5	Mandatory	productOfferingPrice	GET GET /id
TMF620	Product Catalog Management API	4	Mandatory	productSpecification	GET GET /id
TMF620	Product Catalog Management API	4	Mandatory	productOffering	GET GET /id
TMF620	Product Catalog Management API	4	Mandatory	productOfferingPrice	GET GET /id
TMF622	Product Ordering Management API	5	Optional	productOrder	GET GET /id
TMF622	Product Ordering Management API	4	Optional	productOrder	GET GET /id
TMF637	Product Inventory Management API	5	Mandatory	product	GET GET /id POST PATCH DELETE
TMF637	Product Inventory Management API	4	Mandatory	product	POST GET GET /id PATCH DELETE
TMF633	Service Catalog Management API	4	Optional	serviceSpecification	GET GET /id
TMF638	Service Inventory Management API	5	Optional	service	GET GET /id
TMF638	Service Inventory Management API	4	Optional	service	GET /id GET
TMF641	Service Ordering Management API	4	Optional	serviceOrder	GET GET /id POST PATCH DELETE

TMF641	Service Ordering Management API	4	Optional	cancelServiceOrder	GET GET /id POST
TMF641	Service Ordering Management API	5	Optional	serviceOrder	GET GET /id POST PATCH DELETE
TMF641	Service Ordering Management API	5	Optional	cancelServiceOrder	GET GET /id POST
TMF634	Resource Catalog Management API	4	Optional	resourceSpecification	GET GET /id
TMF634	Resource Catalog Management API	5	Optional	resourceSpecification	GET GET /id
TMF639	Resource Inventory Management API	4	Optional	resource	GET GET /id
TMF639	Resource Inventory Management API	5	Optional	resource	GET GET /id
TMF652	Resource Order Management API	4	Optional	resourceOrder	GET /id POST
TMF652	Resource Order Management API	4	Optional	cancelResourceOrder	GET /id POST
TMF652	Resource Order Management API	5	Optional	resourceOrder	GET /id POST
TMF652	Resource Order Management API	5	Optional	cancelResourceOrder	GET /id POST
TMF701	Process Management API	4	Optional	processFlow	GET GET /id POST DELETE /id

TMF701	Process Management API	4	Optional	taskFlow	GET GET /id POST DELETE /id
TMF701	Process Management API	5	Optional	process	GET GET /id POST DELETE /id
TMF701	Process Management API	5	Optional	task	GET GET /id POST DELETE /id
TMF651	Agreement Management API	4	Optional	agreement	GET GET /id
TMF666	Account Management API	4	Optional	billingAccount	GET /id GET
TMF666	Account Management API	5	Optional	billingAccount	GET /id GET
TMF676	Payment Management API	4	Optional	payment	GET /id GET
TMF669	Party Role Management API	4	Optional	partyRole	GET GET /id
TMF669	Party Role Management API	5	Optional	partyRole	GET GET /id
TMF669	Party Role Management API	5	Optional	partyRoleSpecification	GET GET /id
TMF632	Party Management API	4	Optional	individual	GET GET /id
TMF632	Party Management API	4	Optional	organization	GET GET /id
TMF632	Party Management API	5	Optional	individual	GET GET /id

TMF632	Party Management API	5	Optional	organization	GET GET /id
TMF679	Product Offering Qualification Management API	4	Optional	productOfferingQualification	GET GET /id POST PATCH
TMF679	Product Offering Qualification Management API	5	Optional	checkProductOfferingQualification	GET GET /id POST PATCH
TMF646	Appointment Management API	4	Optional	appointment	GET GET /id POST PATCH DELETE
TMF921	Intent Management API	5	Optional	intent	GET GET /id POST PATCH DELETE
TMF673	Geographic Address Management API	4	Optional	geographicAddress	GET GET /id POST PATCH
TMF673	Geographic Address Management API	4	Optional	geographicSubAddress	GET GET /id POST PATCH
TMF673	Geographic Address Management API	4	Optional	geographicAddressValidation	GET GET /id POST PATCH
TMF673	Geographic Address Management API	5	Optional	geographicAddress	GET GET /id POST PATCH

TMF673	Geographic Address Management API	5	Optional	geographicSubAddress	GET GET /id POST PATCH
TMF673	Geographic Address Management API	5	Optional	geographicAddressValidation	GET GET /id POST PATCH
TMF674	Geographic Site Management API	4	Optional	geographicSite	GET GET /id POST PATCH
TMF674	Geographic Site Management API	5	Optional	geographicSite	GET GET /id POST PATCH
TMF675	Geographic Location Management API	4	Optional	geographicLocation	GET GET /id POST PATCH
TMF648	Quote Management API	4	Optional	quote	GET GET /id
TMF648	Quote Management API	5	Optional	quote	GET GET /id

3.4. Events

The diagram illustrates the Events which the component may publish and the Events that the component may subscribe to and then may receive. Both lists are derived from the APIs listed in the preceding sections.

Published Events

API ID	API Name	Event Resources
--------	----------	-----------------

	ProductOrder	productOrderStateChangeEvent productOrderCreateEvent productOrderAttributeValueChangeEvent productOrderDeleteEvent productOrderInformationRequiredEvent cancelProductOrderCreateEvent cancelProductOrderStateChangeEvent cancelProductOrderInformationRequiredEvent

	QuoteManagement	quoteDeleteEvent

(PlantUML source: [TMFC003 Subscribed Events 1.yaml](#) — split across 2 diagrams since the full subscribed-events list has more than 60 event names combined; see the following diagram for the rest.)

4. Machine Readable Component Specification

Refer to the ODA Component Directory on the TM Forum website for the machine-readable component specification files for this component.

5. References

5.1. TMF Standards related versions

Standard	Version(s)
eTOM	v25.5
SID	v25.5
Functional Framework	v23.0, v25.5

5.2. Jira References

eTOM - ISA-389 - Improve Manage Order Fallout (1.3.3.8) description and decomposition (DONE): 1.3.3.8 - Manage Order Fallout, as this L3 is shared by POCV and POOM components (to be consistent with Functional Framework mapping), clarify which type of fallout needs to be managed during the order delivery orchestration (at POOM level) and which needs to be managed at Product Order Capture and Follow-Up level (by POCV)

SID - ISA-399 - New BEs to describe Orchestration Plan and Delivery Process (BACKLOG): describe Orchestration Plan and delivery process at Product Order level. This could be added at least as a specialization from Project ABE.

Functional Framework Already integrated in Functional Framework R22.0: - Function 174 - Customer Order Error Resolution Support: review the definition of this function, may split it in 2 as it is proposed to be mapped to POCV and to POOM - Function 723 - Customer Order Item Decomposition: the term "decomposition" in the function name or definition doesn't seem appropriate, since by definition a product order is built up of order items according to the catalog structure of product offerings and products

Need to be studied for R22.0 or R22.5: - ISA-397 - Split Function 342 - Mass Service/product pre-activation (SME REVIEW): need to split this function in 2, one at product level, the other at service level - ISA-398 - Review Function 743 - Number Portability Orchestration (DONE): review functions related to Number Portability and clarify which level (product/service/resource) each concerns, split if necessary

API - AP-3664 - Manage Amend Order (DONE): does POOM need to issue TMF641 PATCH /serviceOrder and TMF652 PATCH /resourceOrder? No scenario identified where POOM would need to PATCH a service or resource order; order updates due to a change in intent should go through amendments, preferably using a task-based mechanism similar to cancellation requests (e.g. an amendment of a product order would result in a new orchestration plan, with changes trickling down to POOM, SOM and ROM as amendment and/or cancellation requests). Amend task operations are needed for all P/S/R order APIs.

5.3. Further resources

This component is involved in use cases described in IG1228 How to use ODA - Using Open APIs to realize Use Cases.

6. Administrative Appendix

6.1. Document History

6.1.1. Version History

Version Number	Date	Modified by	Description of changes
1.0.0	29-Mar-2022	Gaetano Biancardi, Anastasios Sarantis, Sylvie Demarest, Dimitrios Lagkouvardos	Final edits prior to publication

1.0.1	25-Jul-2023	Ian Turkington	No content changed, simply a layout change to match template 3.
1.0.1	15-Aug-2023	Amaia White	Final edits prior to publication
1.1.1	25-Jun-2024	Sylvie Demarest	Aligned to Frameworks 23.5; aligned to latest template
2.0.0	21-Oct-2024	Gaetano Biancardi	Dependent API: corrected typo and set the following APIs mandatory: TMF620, TMF737
2.0.0	13-Mar-2025	Rosie Wilson	Final administrative updates

6.1.2. Release History

Release Status	Date Modified	Modified by	Description of changes
Pre-production	29-Mar-2022	Goutham Babu	Initial release
